

### **Assignment 3 – Jason Ajmo**

I greatly underestimated how long this project would take. I did it all in one sitting, with no breaks, and it took about 9 hours. I definitely learned a lot, though. I'm looking forward to fully integrating content providers.

#### **Part 1: Bookstore**

I don't think I had any deviation from the specs on this one. Note: The submitted Client application is the same as the last one.

#### **Part 2: Chat App**

The only deviation from the spec I had here was removing the "Next" button from the view peers activity. It seemed superfluous and unnecessary, since the spec didn't indicate to do anything with it. I was also unsure what to do with the "Username" setting, as the username is transmitted from the client. I also removed the InetUtils class, since I ended up not using it.
